

On Mori dream surfaces

Antonio Laface
Universidad de Concepción

Talk given at the Shafarevich seminar, Steklov Institute, on
February 14, 2012.

Abstract: Mori dream surfaces are normal surfaces with finitely generated Cox ring. Examples of these are smooth surfaces with big anticanonical divisor $-K_X$, like toric surfaces and del Pezzo surfaces. The topic of this talk is the classification problem of smooth Mori dream surfaces, illustrating in some cases how to calculate their Cox ring.
